

Feature to User Guide Mapping

Which role can View, Create, Edit, Delete, Approve/Publish or Manage each feature

School Management Platform

Feature → Role Permission Matrix

This matrix is generated directly from the application's own authorization code (`App\Enums\Permission`, `App\Enums\Role`) — not inferred from role names. Every row is a real permission the Gate checks; every ✓ means that role's fixed bundle (`Role::permissions()`) actually contains that permission today. If the code changes, this table needs updating — it is not automatically kept in sync.

Two important rules that apply to every row below:

1. A permission only works if the module it belongs to is also switched on for the school (see `docs/module-activation.md`). Module activation and permissions are independent — enabling a module never grants a permission, and holding a permission does nothing if the module is off.
2. **School Admin** always has every permission (the codebase treats it as "all permissions", not a hand-picked list) — it is omitted from individual rows below and shown once at the top for clarity.
3. A **Platform Admin** (`users.is_platform_admin`) is a separate, cross- school concept — not a per-school role. Inside a school they have entered, they hold every permission that school's **School Admin** would. Outside any school, on the `/admin/*` screens, they manage the schools themselves — see the "Platform administration" row.

Legend: **V** = View, **C** = Create, **E** = Edit, **D** = Delete, **A** = Approve / Publish / Lock, **M** = Manage (broader operational control, e.g. configuring categories/structures, reopening a locked record, waiving a charge).

People & access

Feature	School Admin	Principal	Teacher	Bursar	Staff	Parent	Student
Platform administratio (/admin/sc	Platform Admin only	–	–	–	–	–	–

¹ Teacher/Staff can open Student/Staff/Promotion/Learning-materials/ Communication reports only if they also hold that report's own domain permission ([student.view](#), [staff.view](#), [promotion.view](#), [material.view](#), [communication.view](#)) — Staff holds all of these read-only; Teacher holds most of them too (see the People/Academics tables above), which is why both can typically reach these reports. Neither ever gets a Fee report, since neither holds [fees.report](#).

Portals

Feature	Parent	Student
My Children / Dashboard	✓	✓
Own/child's results & report cards	✓ (published only)	✓ (published only)
Own/child's attendance	✓	✓

Own/child's learning materials	– (not built for Parent Portal)	✓
CBT exams	–	✓ (cbt.take — sit an exam, see own released results only)
Own/child's fee statement + online payment	✓	✓
Announcements addressed to their audience	✓	✓
Notifications	✓	✓

Feature	Parent	Student
Profile	✓	✓

Neither Parent nor Student ever reaches a staff-facing screen — they hold no permission from the tables above at all, only `portal.parent` / `portal.student` (+ `cbt.take` for Student). A parent only ever sees their own **linked** children (via the guardian↔student link a School Admin/ Principal creates) — never another family's child, and never a school-wide list.
