

Salesperson / Demonstrator Guide

Click-by-click demo script, talking points and objection handling

School Management Platform

Salesperson / Demonstrator Guide

A click-by-click script for demonstrating the platform to a school owner or principal, without needing a technical person in the room. Read ["Before you demo"](#) once, then use the **Master Demonstration Sequence** as your script — each numbered section is one demo "beat" with everything you need: where to click, what to say, the business case, likely questions, and what to do if something's not switched on or breaks.

Three ready-made routes through the sequence are given at the end: [15-minute](#), [30-minute](#), and [45-minute](#) — each just tells you which numbered sections to use and how long to spend on each.

Before you demo

Use a demo school with realistic data already in it — empty screens sell nothing. If your organization keeps a standing demo school seeded with sample students/teachers/results/fees, log into that; don't build one live in front of a prospect unless you're specifically demonstrating onboarding speed (see §1 and §19).

Two rules that apply to every section below, so we don't repeat them 19 times:

- **"If the feature is unavailable"** almost always means one of two things: (a) that module is switched off for this school — mention that it's a one-click toggle in **School settings** → **Modules**, and either switch it on live (if you're the School Admin in this demo) or say "I'll show you that toggle in the settings section" and move on; or (b) you're logged in as a role that doesn't have that permission — log in as School Admin, which can see everything, for the main demo, and only switch roles deliberately when the point is to show role restriction (see §17).
- **"If a technical issue occurs"** — stay calm, don't improvise explanations for an error message. Say something like *"That's an odd one — let me note it down and our team will make sure it's not an issue for your school specifically."* Move on to the next section. Never try to debug live. Never blame the school's internet or device unless you've actually confirmed that's the cause.

What to never promise, generally: never promise a feature that isn't in this guide exists ("can it also...?" → "let me check and get back to you," never guess); never promise a specific go-live date until contracts/ onboarding logistics are actually agreed; never promise data migration from their current system is automatic (there is no bulk import feature in this version — say so plainly, see §1).

Master Demonstration Sequence

1. Platform / Admin introduction

- **Start:** Sign-in page.

- **Click:** Sign in as a **Platform Admin** account (if your organization runs multiple schools on one platform instance) → lands on **Choose a school**, or go straight to `/admin/schools` if already signed in.
- **Enter:** Nothing yet — just show the **Schools** list.
- **Screen does:** Lists every school on the platform with its status (Active/Suspended).
- **Say while doing it:** *"Every school on this platform is completely separate — your data, your students, your fees. Nobody at another school can ever see yours, and we can prove that later if you'd like."*
- **Business problem:** Schools worry about a shared system meaning shared (or leaked) data.
- **Business benefit:** Hard tenant isolation — enforced at the database level, not just hidden in the interface.
- **Talking points:** *"Think of it like separate buildings on one street — same street, locked doors."*
- **Likely questions:** *"Can platform support see our data?"* — Yes, platform administrators can access any school for support purposes, but every school-level user only ever sees their own school.
- **Never promise:** That platform admin access is disabled entirely — it's needed for support; be honest about it.
- **If unavailable:** If you don't have platform-admin credentials handy, skip straight to §2 — this section is optional context, not core to the sale.

2. School setup

- **Start:** `/admin/schools/create` (as Platform Admin), or skip and use an already-created demo school.
- **Click:** **Create school** (if on the Schools list).
- **Enter:** **School name**, optionally a **Slug**, and optionally an **Initial School Admin** email (an existing account to make the first admin).
- **Screen does:** Creates the school with a sensible set of modules on by default (see §"Module activation" in the School Admin Manual); redirects to the school list.
- **Say while doing it:** *"This is literally how fast a new school gets set up — one form, and you have a working environment with the core features already on."*
- **Business problem:** Owners fear a long, expensive, consultant-driven setup process.
- **Business benefit:** A school exists and is usable in under a minute; everything else (classes, students, fees) is the school's own configuration, done at their own pace.
- **Talking points:** *"You're not locked into our timeline — you can be live today and fill in the details over your first week."* (Point to the [Quick-Start Guide](#) if they ask "then what?")
- **Likely questions:** *"Can we bring our existing student data in?"* — Be honest: there is no automated bulk-import feature in this version; students are added one at a time (still fast — a couple of minutes each). Don't promise otherwise.
- **Never promise:** Automatic data migration from a spreadsheet or another system.

- **If a technical issue occurs:** Have a pre-made demo school ready as a fallback so a failed live creation doesn't stall the demo.

3. School dashboard

- **Start:** Log in as the school's **School Admin** → lands on **Dashboard**.
- **Click:** Nothing required — just look at the page. Scroll to show the KPI cards.
- **Screen does:** Shows onboarding checklist (if incomplete), an administration panel (member counts, recent activity), and KPI cards for Students/Staff/Attendance/Results/Fees/CBT — each only shown if its module is on and the viewer has permission.
- **Say while doing it:** *"This is what a head teacher or administrator sees the moment they log in — the whole school's pulse, in one screen, no digging."*
- **Business problem:** Leadership doesn't have quick visibility into day-to-day school health.
- **Business benefit:** A live, permission-aware summary — nobody sees a number they shouldn't, and a switched-off feature simply doesn't clutter the screen.
- **Talking points:** *"Notice there's no fake zero for a feature you haven't turned on yet — if you don't use CBT, that card just isn't there, not showing a confusing '0'."*
- **Likely questions:** *"Can we customize what's on the dashboard?"* — Not in this version; it's a fixed, sensible set tied to your modules and permissions.
- **If unavailable:** If a KPI card the owner expects isn't showing, check that module is on (§ "Module activation" in the School Admin Manual) — this is itself a good teaching moment, not a failure.

4. Student management

- **Start:** Click **Students** in the left navigation.
- **Click:** **Add student**, or open an existing student from the demo data.
- **Enter (if adding live):** First/last name, admission number, class placement (via **Add enrollment** on their profile afterward).
- **Screen does:** Creates the record; shows a rich profile page (contact info, current class, linked guardians, application account link, lifecycle status, full enrollment history).
- **Say while doing it:** *"Every student has a full history — when they joined, every class they've ever been in, never overwritten. If a student changes class mid-year, you see both, not just the latest."*
- **Business problem:** Schools lose historical records when using spreadsheets or ad-hoc systems — no audit trail of a student's journey.
- **Business benefit:** Permanent, structured history per student; a parent portal and report cards both build directly off this same record — enter it once, it's used everywhere.
- **Talking points:** *"You'll never have to explain 'why does this student not show up in last term's records' — nothing is ever silently overwritten."*

- **Likely questions:** *"What if a student leaves and comes back?"* — Their status changes (Withdrawn), and a new enrollment reactivates them later; history is preserved either way.
- **Never promise:** A student photo/document upload feature — it doesn't exist in this version.
- **If unavailable:** Requires the **Student Management** module (on by default) — if off, switch it on in Modules settings.

5. Teacher management

- **Start:** Click **Teachers**.
- **Click:** **Add teacher**, or open an existing one → **Add assignment**.
- **Enter:** Name, employee number; then for the assignment: session, level, arm, subject.
- **Screen does:** Creates the teacher record; the **assignment** is what scopes that teacher (once they have a login with the Teacher role) to exactly that class + subject everywhere else in the system.
- **Say while doing it:** *"This one assignment step is what makes the whole system self-policing — a teacher physically cannot see or touch another teacher's class, because the system itself doesn't show it to them."*
- **Business problem:** Owners worry about staff overreach — a teacher seeing or editing another class's grades.
- **Business benefit:** Automatic, built-in scoping with zero manual policing needed.
- **Talking points:** *"You set this once per teacher, and it's enforced everywhere — attendance, grading, CBT, materials — automatically."*
- **Likely questions:** *"What if a teacher teaches five different classes?"* — Add five assignments; there's no limit.
- **If unavailable:** Requires **Teacher / Staff Management** (on by default).

6. Academic setup

- **Start:** Click **Academic** in the left navigation.
- **Click:** Walk through the **Sessions**, **Levels**, and **Subjects** tabs.
- **Enter:** (If live) a session name/dates, a level name/code, a subject name/code.
- **Screen does:** Builds the structural backbone every other feature (attendance, assessments, fees, timetable) is scoped to.
- **Say while doing it:** *"Nothing about your class structure is preset or assumed — you name your own classes, your own subjects, your own terms. If you call it 'JSS 1' or 'Grade 7,' that's entirely up to you."*
- **Business problem:** Rigid systems force a school to adapt its own naming/structure to the software.
- **Business benefit:** The structure adapts to the school, not the other way round.

- **Talking points:** *"This is a five-minute, one-time setup — and it's the foundation everything else stands on."*
- **Likely questions:** *"What if we restructure classes next year?"* — You just add a new session and rebuild levels/arms as needed; old data stays intact under the old session.
- **If unavailable:** Always available — this is core, not a toggleable module.

7. Attendance

- **Start:** Click **Attendance** → **Create register** (as a Teacher, or School Admin demonstrating on their behalf).
- **Click:** Pick a class and date → **Create register**. Then click through marking students, using **Mark all present** then adjusting exceptions.
- **Enter:** Attendance status per student (Present/Absent/Late/Excused).
- **Screen does:** Captures the class roster automatically, locks the register once submitted, and rolls the numbers up into the student's results/report card and the Attendance report.
- **Say while doing it:** *"Watch how fast this is — mark everyone present, then just fix the two or three exceptions. Thirty seconds for a class of forty."*
- **Business problem:** Paper attendance registers are slow, easy to lose, and impossible to report on later.
- **Business benefit:** Fast entry, permanent digital record, automatic reporting.
- **Talking points:** *"Once submitted, it's locked — nobody 'quietly edits' a past attendance record. If a genuine correction is needed, an administrator has to deliberately reopen it, and that's logged."*
- **Likely questions:** *"What if we forget to take attendance one day?"* — You can create a register for a past date and back-fill it; there's no penalty, just an accurate record.
- **If unavailable:** Requires the **Attendance** module (on by default).

8. Assessment / Assignments

- **Start:** Click **Assessments** → **New assessment** (or **Assignments** tab for homework).
- **Click:** Create an assessment → open its **Score sheet** → enter a few scores → **Save scores** → **Publish** → **Lock**.
- **Enter:** Category, maximum score, title, date; then per-student scores.
- **Screen does:** Locked, published assessment scores become the raw material Results compiles from later.
- **Say while doing it:** *"This score sheet is deliberately simple — one row per student, big number field, nothing fiddly. And notice it won't even let you save a score above the maximum."*
- **Business problem:** Manual grade books are error-prone and don't feed into report cards automatically.

- **Business benefit:** Direct line from a single score entry to the final report card — no re-typing anywhere.
- **Talking points:** *"Locking an assessment is a deliberate, irreversible-by-a-teacher step — it's what guarantees a report card's numbers can't quietly drift after the fact."*
- **Likely questions:** *"Can we weight tests differently from classwork?"* — Yes, that's configured once in the Weighting Scheme (shown in §9).
- **If unavailable:** Requires **Assessments** module (on by default).

9. Results / Report Cards

- **Start:** Click **Results** → open a result run with compiled data (or walk through **Compile** → **Mark reviewed** → **Approve** → **Publish** → **Lock** live if you have locked assessment data ready).
- **Click:** Open a student's **Report card**.
- **Screen does:** Compiles every locked assessment for the term into a final grade, class position, and a printable, branded report card.
- **Say while doing it:** *"This is the payoff of everything we just did — every score you entered becomes this, automatically, with your school's own logo and grading scale."*
- **Business problem:** Manually compiling report cards at term-end is slow, stressful, and error-prone.
- **Business benefit:** One click compiles an entire class; the multi-step approval process (review → approve → publish → lock) means nothing goes out to parents by accident.
- **Talking points:** *"Notice the deliberate checkpoints — nothing reaches a parent's screen until someone explicitly clicks Publish. And once locked, it's the permanent historical record — any later correction goes through a tracked adjustment, never a silent edit."*
- **Likely questions:** *"Can we design our own report card layout?"* — You control which of about two dozen fields show (comments, attendance summary, signatures, etc.) and your branding, but the overall layout itself is fixed, not a drag-and-drop designer.
- **Never promise:** A fully custom report-card designer, or bulk PDF export of a whole class at once (report cards are viewed/printed one student at a time).
- **If unavailable:** Requires **Results & Report Cards** module (on by default) and at least one locked, scored assessment to compile from — use the pre-seeded demo data if you don't have time to build this live.

10. Fees

- **Start:** Click **Fees**.
- **Click:** Open a student's statement → point out charges, discounts, payments, and the outstanding balance.
- **Enter:** (Optional live demo) **Record payment** — amount, date, reference, method.
- **Screen does:** Shows a complete, always-accurate financial picture per student, with every charge, discount, waiver, and payment kept as a permanent record.

- **Say while doing it:** *"Every number here is calculated by the system in real time — nobody's manually tallying a spreadsheet, and nothing can be quietly deleted. A correction always leaves a trace."*
- **Business problem:** Manual fee tracking leads to disputes ("I paid that already!") with no clean record to settle them.
- **Business benefit:** A permanent, auditable ledger per student that both the school and the parent can see (their own child only).
- **Talking points:** *"If a payment needs to be reversed, we don't delete it — we void it, and the void reason stays on record forever. That protects you in a dispute."*
- **Likely questions:** *"Can a parent see other students' fees?"* — Absolutely not; a parent only ever sees their own linked child's statement, enforced the same way as every other portal restriction.
- **If unavailable:** Requires the **Fees & Payments** module (on by default).

11. Online payment

- **Start:** School settings → **Payments** tab (to show the configuration), then a parent/student's **Fees** → **Pay online** button.
- **Click: Pay online** → shows the redirect to the secure payment provider (Paystack).
- **Screen does:** Validates the amount against the actual outstanding balance server-side (a parent cannot pay more than is actually owed via a trick), redirects to Paystack's own secure checkout, and records the verified payment automatically once confirmed.
- **Say while doing it:** *"We never see or store a card number — that all happens on Paystack's own secure page. Our part is just confirming the payment really went through before we mark it paid."*
- **Business problem:** Manual bank transfers are slow to reconcile and parents want a modern, convenient way to pay.
- **Business benefit:** Instant, verified, automatically-recorded payments — no reconciliation headache.
- **Talking points:** *"This isn't a shortcut around your normal payments — it's the exact same ledger, just with an extra, faster way to pay into it."*
- **Likely questions:** *"What are Paystack's fees?"* — That's between the school and Paystack directly; don't quote a number unless you actually know their current rate card.
- **Never promise:** A payment gateway other than Paystack, or that funds land in the school's account instantly (that's Paystack's own settlement timeline, not something this system controls).
- **If unavailable:** Needs Paystack keys configured in **School settings** → **Payments** first — if not configured, explain the setup step rather than trying to force a live payment.

12. Parent portal

- **Start:** Log out, log back in as a demo **Parent** account (or open a second browser/incognito window so you can show both sides at once).
- **Click:** Walk through **My Children** → a child's **Results**, **Report cards**, **Attendance**, **Fees** tabs.
- **Screen does:** A read-only window scoped to exactly their own linked children — nothing else.
- **Say while doing it:** *"This is the exact same data we just entered as staff — but the parent only ever sees their own child, and only what you've actually published."*
- **Business problem:** Parents constantly call/visit the school asking "how is my child doing?" — a burden on staff time.
- **Business benefit:** Parents self-serve for routine questions, freeing staff for things that actually need a human.
- **Talking points:** *"Notice there's no way for them to even guess at another family's data — it's not hidden by the interface, it's genuinely inaccessible."*
- **Likely questions:** *"Can parents message teachers through this?"* — Not in this version — the Communication Hub is staff-facing; parents see announcements and their own notifications, but a two-way parent-to- teacher chat isn't built yet. Be honest about this.
- **If unavailable:** Requires **Parent Portal** module on, the guardian linked to the student, and the guardian's account holding the Parent role — all three, shown in the School Admin Manual §11–§12.

13. Student portal

- **Start:** Log in as a demo **Student** account.
- **Click:** Walk through **Results**, **Report cards**, **Attendance**, **Assignments**, **Timetable**.
- **Screen does:** The same shape as the Parent Portal, but for the student's own record directly.
- **Say while doing it:** *"Same principle — a student sees exactly their own record, nothing about classmates."*
- **Business problem:** Students (especially older ones) want direct access to their own academic information, not filtered through a parent.
- **Business benefit:** Self-service for the student, same strict privacy guarantee.
- **Likely questions:** *"Can a student edit their own profile?"* — They can view their profile; substantive edits (contact info, status) stay with school staff.
- **If unavailable:** Requires **Student Portal** module on, the student's account linked, and the Student role assigned.

14. Learning materials

- **Start:** Click **Learning Materials** → **Upload**.
- **Click:** Choose a class/subject, title, and a file → **Upload & save**.
- **Screen does:** Stores the file securely; students in that exact class can view/download it — nobody else.

- **Say while doing it:** *"A teacher can share a worksheet, a scanned handout, or an audio file for a language class, in seconds."*
- **Business problem:** Sharing class materials via WhatsApp/email is disorganized and gets lost.
- **Business benefit:** One organized place, scoped correctly, permanent.
- **Likely questions:** *"Can we upload videos?"* — Not in this version — PDF, images, and audio only; be upfront about this limit.
- **Never promise:** Video support, or unlimited file size (there's a size cap).
- **If unavailable: Learning Materials** module is off by default — switch it on to demo, or explain the toggle.

15. CBT (Computer-Based Testing)

- **Start:** Click **CBT** → open an existing scheduled exam, or create one live.
- **Click:** Show question setup, then switch to a **Student** account and actually **sit the exam** — watch the countdown timer, answer a question (note it auto-saves instantly), and **Submit**.
- **Screen does:** Times the attempt server-side (not trusting the student's device clock), auto-saves every answer, auto-submits when time runs out, and marks it automatically.
- **Say while doing it:** *"Watch — I answer, and it's already saved, no separate 'save' click. And that timer isn't just cosmetic — even if their browser crashes, the server enforces the real time limit."*
- **Business problem:** Paper exams are slow to mark and easy to lose; schools want modern testing without buying separate exam software.
- **Business benefit:** Automatic marking, tamper-resistant timing, and configurable result release (instant or scheduled) — all built in.
- **Talking points:** *"You choose whether students see their score the moment they submit, or on a date you set — useful if you want to review results before releasing them."*
- **Likely questions:** *"Can it do essay questions?"* — Not in this version — multiple-choice and true/false only, auto-marked; no manually-graded essay questions and no exam proctoring/lockdown features. Be upfront.
- **Never promise:** Essay/manual-marking support, proctoring, or that a student's identity is verified beyond their login.
- **If unavailable: CBT** module is off by default — switch it on to demo.

16. Question Bank

- **Start:** Click **CBT** → **Questions**.
- **Click:** **Add question** → show writing one, then show reusing it by attaching it to a different exam.
- **Screen does:** A reusable pool of questions independent of any one exam — editing or archiving a bank question never changes an exam that already used it (each exam keeps its own frozen

copy).

- **Say while doing it:** *"Build your question bank once, reuse it every term — and if you improve a question later, it never silently changes a test a student already sat."*
- **Business problem:** Rewriting exam questions from scratch every term wastes teacher time.
- **Business benefit:** Write once, reuse forever, with historical integrity guaranteed.
- **Likely questions:** *"Can multiple teachers share a question bank?"* — Yes, it's shared across your whole school (a Teacher can create/edit only within their own assigned subjects, but everyone can browse the bank).
- **If unavailable:** Part of the **CBT** module — same toggle as §15.

17. Communication

- **Start:** Click **Communication** (threads) and **Announcements**.
- **Click:** Log a new thread; publish a test announcement to a chosen audience.
- **Screen does:** A staff-facing log of parent interactions, plus school-wide announcements that reach the right audience (everyone, all staff, teachers, parents, or students).
- **Say while doing it:** *"This isn't a chat app — it's an accountability log. If a parent calls about a concern, log it here, and anyone on staff can see the history next time."*
- **Business problem:** Parent complaints/concerns get lost between staff members with no shared record.
- **Business benefit:** A shared, searchable log with a clear open/resolved/escalated status.
- **Likely questions:** *"Does this send SMS or WhatsApp messages?"* — Not in this version — it's in-app only (announcements + notifications); no SMS/WhatsApp/email delivery yet. Be honest.
- **Never promise:** SMS/WhatsApp/email delivery, or two-way parent messaging into a thread.
- **If unavailable:** Requires the **Notifications** module (on by default).

18. Reports / Analytics + Audit / Security

- **Start:** Click **Reports**.
- **Click:** Open **Academic performance** or **Fees & collections**, show the filters and **Export CSV**. Then click **Audit Log**.
- **Screen does:** Filterable, exportable reports across every enabled module; the Audit Log shows a permanent, tamper-proof trail of significant administrative actions.
- **Say while doing it:** *"Everything you've seen today rolls up into these reports — and separately, the Audit Log answers 'who did that, and when' for anything that matters, permanently. Nobody, including us, can edit or delete an audit entry."*
- **Business problem:** Owners want oversight without having to personally check every screen; they also want accountability when something goes wrong.
- **Business benefit:** Reporting gives visibility; the audit trail gives accountability — both without any extra manual work.

- **Likely questions:** *"Can I see this from my phone?"* — Yes, the whole system is responsive and works in a mobile browser (there's no separate native app).
- **If unavailable:** Reports need the **Reporting & Analytics** module on (default); Audit Log is always available to School Admin/Principal, not a toggle.

19. Closing / pilot discussion

- **Start:** Return to the Dashboard, or simply stop clicking.
- **Say:** Summarize the 2–3 things that matter most to *this* school based on what they reacted to during the demo — don't repeat the whole tour. Propose next steps: a pilot period, who on their side needs training (point to the [Training Handover Checklist](#)), and a realistic first-week plan (point to the [Quick-Start Guide](#)).
- **Business benefit reminder:** Tenant isolation, permission-aware screens, permanent audit trails, and a workflow that mirrors how the school already operates — not a rigid system they must adapt to.
- **Likely questions:** *"What does it cost?"* / *"How long does onboarding take?"* — Use your organization's actual current pricing and onboarding timeline; this guide does not set those.
- **Never promise:** A specific price, contract term, or go-live date — that's a commercial conversation, not part of the product demo.
- **If a technical issue occurred earlier:** Reassure them it's logged and will be looked at — don't let one glitch overshadow the rest of the demo.

15-minute quick demo

Fast pace, dashboard-first, hits the emotional highlights: visibility, security, and the parent experience.

Time	Section
0–2 min	§1–2 (skip if using a pre-built demo school) — quick context only
2–5 min	§3 Dashboard
5–8 min	§4 Students or §9 Results (pick whichever matches the owner's stated priority)
8–11 min	§12 Parent Portal
11–13 min	§10 Fees

Time	Section
13–15 min	§19 Closing

30-minute standard demo

Adds the daily-operations proof points and reporting.

Time	Section
0–3 min	§3 Dashboard
3–6 min	§6 Academic setup
6–9 min	§4 Students
9–11 min	§5 Teachers
11–15 min	§7 Attendance
15–19 min	§8 Assessment/Assignments
19–23 min	§9 Results / Report Cards
23–26 min	§10 Fees
26–28 min	§12 Parent Portal
28–30 min	§19 Closing

45-minute detailed demo

The full tour, for a serious buyer or a committee evaluation.

Time	Section
0–2 min	§1 Platform/Admin intro (if relevant audience)
2–4 min	§2 School setup

Time	Section
4–6 min	§3 Dashboard
6–9 min	§6 Academic setup
9–12 min	§4 Students
12–14 min	§5 Teachers
14–18 min	§7 Attendance
18–22 min	§8 Assessment/Assignments
22–27 min	§9 Results / Report Cards
27–30 min	§10 Fees
30–32 min	§11 Online payment
32–35 min	§12 Parent Portal
35–37 min	§13 Student Portal
37–39 min	§14 Learning materials
39–42 min	§15 CBT (+ §16 Question Bank if there's time)
42–43 min	§17 Communication
43–44 min	§18 Reports/Analytics + Audit
44–45 min	§19 Closing/pilot discussion
