

School Administrator Manual

Complete workflow reference for School Admins and Principals

School Management Platform

School Administrator Manual

A practical operating guide for the **School Admin** role. School Admin automatically holds every permission in the system within your school — if a screen exists, you can reach it. This manual walks through the areas you'll actually use, in the order a new school typically sets them up.

For a condensed "what do I do on day 1" version, see [Quick-Start Guide](#). For exactly who else can do what, see [Feature → Role Matrix](#).

1. Logging in

Purpose: Get into the system. **Who can do this:** Anyone with an account. **Prerequisites:** An email + password given to you by whoever set up your account (or your own, if you registered).

Steps: 1. Go to the application's web address. You'll land on the **Sign in** page. 2. Enter your **Email address** and **Password**. 3. Optionally tick **Remember me on this device**. 4. Click **Sign in**. 5. If you belong to more than one school (rare for a School Admin), you'll land on a **Choose a school** page first — click **Enter** next to the right one. 6. You'll land on the **Dashboard**.

Expected result: You see the Dashboard with your school's name shown top-right.

Common mistakes / troubleshooting: - Wrong password three times in a short period will briefly lock login attempts — wait a minute and try again. - Forgot your password? Use the **Forgot password?** link on the sign-in page and follow the email that arrives. - If your account has been suspended or disabled, you'll be signed out automatically — contact your platform administrator.

2. Understanding the dashboard

Purpose: A one-page snapshot of your school right now. **Who can do this:** Everyone with a staff role sees some version of it; School Admin sees the fullest version.

What's on it: - **Current school** — confirms which school you're working in (you'll only ever see that school's data). - **School onboarding checklist** (only while incomplete) — links to finish assigning a School Admin, reviewing settings, and creating your first academic session. - **Administration panel** (if you hold `audit.view`) — active/suspended member counts, how many modules are enabled, and the 5 most recent administrative actions, with a link to the full **Audit Log**. - **KPI cards** (only shown once the **Reporting & Analytics** module is on, and only the cards you have permission to see) — Students, Staff, Attendance (last 30 days), Results, Fees, CBT. A card is simply absent if its module is off — this is deliberate, not a bug. - **View all reports** → link into the full Reports area.

Common mistakes: Expecting a KPI card to appear when its module is switched off — turn the module on first (see §14).

3. School profile / settings

Purpose: Your school's contact details, branding, regional preferences, and (if enabled) online-payment configuration. **Who can do this:** School Admin edits everything; Principal and Bursar have read-only access to the same pages. **Prerequisites:** None.

Steps: 1. Click **School settings** in the left navigation (or go to </settings/school>). 2. You'll land on **School settings**, with sub-tabs across the top: **Profile**, **Branding**, **Regional**, **Modules**, and (if the Fees module and Paystack are relevant) **Payments**. 3. **Profile** tab: contact email/phone, website, and full address. Edit the fields and click **Save profile**. 4. **Branding** tab: upload a logo (used on printed report cards) and set a brand colour, then save. 5. **Regional** tab: timezone, locale, currency, date format, and which day the week starts on. 6. **Modules** tab: see §14 below. 7. **Payments** tab: see §22 (Payments).

Expected result: A green confirmation banner after each save; the new values are shown immediately.

Common mistakes: - The school **Name**, **Slug**, and **Status** shown at the top of the Profile tab are **read-only** — those are set by platform administration when the school is created, not editable here. - Uploading a very small or non-image file as a logo will be rejected — use a real image file within the size the form allows.

4. Academic session setup

Purpose: The academic year(s) everything else (classes, attendance, results, fees) is scoped to. **Who can do this:** School Admin, Principal manage; Teacher, Staff view only. **Prerequisites:** The **Academic Management** module must be on (it is, by default).

Steps: 1. Go to **Academic** in the left navigation → you land on **Academic sessions**. 2. Under **Add a session**, enter a **Name** (e.g. **2025/2026**), **Starts on** and **Ends on** dates, and optionally tick **Make this the current session**. 3. Click **Add session**. 4. To later mark a different session current, click **Make current** next to it in the list. 5. Click **Terms** next to a session to add its periods (see §5).

Expected result: The session appears in the list, badged **Current** if you ticked the box.

Common mistakes: - Only one session can be "current" at a time — marking a new one current un-marks the previous one automatically. - You can create a session without any terms yet — you don't have to finish everything in one sitting.

5. Period / term configuration

Purpose: Terms/semesters within a session (e.g. First Term, Second Term). **Who can do this:** Same as academic sessions. **Prerequisites:** At least one academic session exists.

Steps: 1. From **Academic sessions**, click **Terms** next to the session. 2. Add a term with a **Name**, **Starts on/Ends on**, and its order position. 3. Use **Make current** to mark the active term within that session.

Expected result: The term appears under that session, and is now selectable wherever a screen asks for "Term / period" (attendance, assessments, results, fees, reports).

Common mistakes: Forgetting to mark a new term current — several screens default their filters to "the current term," so an un-marked term won't show up as the default anywhere until you do.

6. Levels

Purpose: Your school's classes / year groups (e.g. "Primary 1", "JSS 2") — nothing is preset, you name and order them yourself. **Who can do this:** School Admin, Principal manage; others view.

Prerequisites: None beyond the Academic module being on.

Steps: 1. Go to **Academic** → **Levels** tab. 2. Under **Add a level**, enter a **Name** (e.g. **Primary 1**), a **Short code** (e.g. **PRI1**), and its **Order** (a number — lower shows first). 3. Click **Add level**. 4. Click **Arms & subjects** next to a level to add its arms and offered subjects (§7, §8).

Expected result: The level appears in the ordered list.

Common mistakes: Two levels with the same order number — the system allows it, but the display order becomes ambiguous; use distinct numbers.

7. Level arms

Purpose: Streams/sections within a level (e.g. "Gold", "Silver") — optional; many schools don't split every level into arms. **Who can do this:** Same as levels. **Prerequisites:** At least one level exists.

Steps: 1. From **Levels**, click **Arms & subjects** next to the level. 2. Under **Add an arm / stream**, enter **Name** (e.g. **Gold**), **Code** (e.g. **G**), and **Order**. 3. Click **Add arm**.

Expected result: The arm appears under that level and becomes selectable everywhere a class is chosen (attendance, assessments, timetable, results, fees).

Common mistakes: Adding arms to a level that doesn't need them — completely optional; a level with no arms just means "the whole level is one class."

8. Subjects

Purpose: Your school's subject list, and which levels offer which subjects. **Who can do this:** Same as levels/arms. **Prerequisites:** None to create a subject; a level must exist to offer one to it.

Steps: 1. Go to **Academic** → **Subjects** tab. 2. Under **Add a subject**, enter **Name** (e.g. **Mathematics**), **Code** (e.g. **MTH**), **Order**, and an optional **Description**. 3. Click **Add subject**. 4. To offer it at a level: go to that level's **Arms & subjects** page, tick the subject's checkbox under **Subjects offered**, and click **Save subjects**.

Expected result: The subject is available to select wherever that level's subjects are relevant (assessments, timetable, CBT, learning materials, teacher assignments).

Common mistakes: Creating a subject but forgetting to tick it "offered" at any level — it will exist but never appear in class-scoped dropdowns until you do.

9. Teachers

Purpose: Teacher/staff professional records — separate from any login account (a teacher record can exist with no linked account at all). **Who can do this:** School Admin, Principal manage; Bursar, Teacher, Staff view only. **Prerequisites:** **Teacher / Staff Management** module on (it is, by default).

Steps: 1. Go to **Teachers** in the left navigation. 2. Click **Add teacher** (top-right, or from the empty state). 3. Fill in **Name** (first/middle/last, optional preferred name), **Employment** (employee number, start date), **Contact** (email/phone/address), and any **Notes**. 4. Click **Add teacher**. 5. Open the teacher's profile → **Application account** section to link them to an existing login (see §12) — optional, only needed if they'll sign in themselves. 6. Use **Add assignment** on their profile to assign them to teach a subject at a class (see below).

Assigning a teacher to a class + subject: 1. Open the teacher's profile. 2. Click **Add assignment**. 3. Choose the session, level, arm (if used), and subject. 4. Click **Add assignment**.

Expected result: The teacher appears in the Teachers list; their assignment appears on their profile and makes them eligible to record attendance/assessments/CBT/learning materials for that specific class + subject (Teachers are automatically scoped to only their own assignments — see the permission matrix).

Common mistakes: - Forgetting the assignment step — a teacher record alone does not let a Teacher-role user record anything; the **assignment** is what scopes them to a specific class/subject. - Trying to link a teacher's account before that person has actually registered/been added as a member — they must already be a **member of the school** (see §12) before you can link them.

10. Students

Purpose: The student record + their class placement over time. **Who can do this:** School Admin, Principal manage; Bursar, Teacher, Staff view only. **Prerequisites:** **Student Management** module on (default) and at least one level exists if you intend to enroll them right away.

Steps — add a student: 1. Go to **Students** in the left navigation. 2. Click **Add student**. 3. Fill in **Name**, **Personal** (date of birth, gender — optional), **Admission** (admission number — required, and admission date), **Contact**, and **Notes**. 4. Click **Add student**.

Steps — place them in a class (enroll them): 1. Open the student's profile. 2. Under **Academic placement**, click **Add enrollment**. 3. Choose the session, level, arm, and a start date. 4. Save.

Steps — change their class later (promotion, transfer): - Prefer the dedicated **Promotion** workflow (§23) for end-of-term promotion of a whole class. For a one-off individual change, add a new enrollment the same way — the old one is automatically closed, never deleted.

Steps — link a login / change status: - **Application account** section: link an existing member so the student can sign in to the Student Portal (needs the Student role too — see §11/§12). - **Lifecycle status** section: change between Active / Inactive / Withdrawn / Graduated. (Graduating should normally go through the dedicated **Graduation** workflow, §24, which also closes their enrollment correctly — changing status here alone does not.)

Expected result: The student appears in searches/lists; once enrolled, they appear on that class's attendance registers, assessments, results, and (if guardians are linked) the Parent Portal.

Common mistakes: - Adding a student without ever enrolling them — they'll exist but won't show up on any class roster (attendance, assessments) until enrolled. - Admission numbers must be unique within your school — a duplicate will be rejected.

11. Guardians

Purpose: Parent/guardian contact records, and linking them to their children. **Who can do this:** School Admin, Principal manage; Bursar, Teacher, Staff view only. **Prerequisites:** **Parent / Guardian Management** module on (default).

Steps — add a guardian: 1. Go to **Guardians** in the left navigation. 2. Click **Add guardian**. 3. Fill in name and contact details. 4. Click **Add guardian**.

Steps — link a guardian to a student: 1. Open the student's profile. 2. Under **Parents / guardians**, click **Add guardian**. 3. Choose (or create) the guardian, set the **relationship** (mother, father, etc.), and whether they're the **primary** contact. 4. Save.

Steps — let the guardian sign in (Parent Portal): - On the guardian's own profile, link them to an existing member account the same way you would a teacher (§12) — they also need the **Parent** role assigned (§12) and the **Parent Portal** module on (§14).

Expected result: The guardian appears on the student's profile; once linked to a login with the Parent role, they see that child (and any siblings linked to them) in the Parent Portal — never another family's child.

Common mistakes: Linking a guardian's contact record without also completing the login-account link — the guardian will be recorded, but won't be able to sign in until both the account link **and** the Parent

role are set.

12. User accounts (members)

Purpose: Who can sign in to your school, and what role they hold. **Who can do this:** School Admin, Principal (`member.view` + `member.assign-role`). **Prerequisites:** The person must already have a registered account on the platform (this screen adds an **existing** account to your school — it does not create new logins or send invitations).

Steps: 1. Go to **Members** in the left navigation. 2. Click **Add member**. 3. Enter their **Account email** (must match an existing registered account) and choose a **Role** from the dropdown (only roles you're allowed to grant appear — you can never grant a role more senior than your own). 4. Click **Add member**. 5. To change someone's role later or remove them, use the actions on the Members list.

Expected result: The person appears in the Members list with their role; they can now sign in and see the school (subject to whatever their role permits).

Common mistakes: - If the person hasn't registered an account yet, ask them to go to the registration page first — this screen only adds *existing* accounts. - You cannot change your own role or remove yourself from the Members list — this is a deliberate safety rule, not a bug. - Granting the wrong role is easy to fix — just change it again from the Members list.

13. Roles and permissions

Purpose: Understand what each role can and can't do — you don't configure this; it's fixed by the application. **Who can do this:** N/A — this is reference knowledge, not an action.

There are seven roles: **School Admin**, **Principal**, **Bursar**, **Teacher**, **Staff**, **Parent**, **Student**. Each is a fixed bundle of permissions (see the full [Feature → Role Matrix](#)). You assign a role to a member (§12); you cannot invent a new role or edit what an existing role can do.

Key things to know: - A Teacher only sees/records data for the specific classes and subjects they've been assigned (§9) — not the whole school. - A Bursar has zero access to academic data (results, attendance, assessments) beyond simply *viewing* students/guardians/staff for billing purposes. - A Principal can do almost everything a School Admin can *except* manage school settings/module activation and add/remove members' roles at will — Principal is oversight-heavy, not full control. - Parent and Student never see any staff-facing screen at all — only their own portal.

14. Module activation

Purpose: Turn parts of the application on or off for your school — this is **configuration**, not permission. Turning a module on grants nobody anything; turning it off doesn't remove anyone's role.

Who can do this: School Admin only ([school.settings.update](#)); Principal/Bursar can view the same page read-only. **Prerequisites:** None.

Steps: 1. Go to **School settings** → **Modules** tab. 2. Modules are grouped (People, Academics, Assessment, Finance, Reporting, Communication, Portals). Each shows its current state (**Enabled/Disabled**) and whether it's **Available** or still **Planned** (not yet built — your choice is saved for when it ships). 3. Click **Enable** or **Disable** next to a module. 4. Some modules require others first (shown as **Requires: ...**) — e.g. **Timetable** requires **Academic Management** and **Teacher / Staff Management**.

Which modules are on by default for a new school: Academic Management, Student Management, Parent/Guardian Management, Teacher/Staff Management, Promotion & Graduation, Attendance, Assessments, Results & Report Cards, Fees & Payments, Reporting & Analytics, Notifications, Parent Portal, Student Portal.

Which start off (opt-in specialised tools): Timetable, Learning Materials, CBT / Online Examinations, Entry / Placement Assessment.

Expected result: The relevant nav link appears/disappears immediately for every user in your school once you enable/disable a module.

Common mistakes: - Trying to enable a module whose dependency isn't on yet — enable the dependency first (the page tells you what's required). - Expecting disabling a module to delete its data — it doesn't. Data is preserved; only access through the UI is hidden.

15. Timetable

Purpose: Weekly period schedules for classes and teachers. **Who can do this:** School Admin, Principal manage; Teacher, Staff view. **Prerequisites:** **Timetable** module on (off by default — enable it first); Academic and Teacher/Staff modules on.

Steps: 1. Go to **Timetable** in the left navigation. 2. Click to create a new timetable for a session/level/arm. 3. Add entries — day, period time, subject, teacher, optional room. 4. The system checks for conflicts (double-booked teacher/class/room) automatically. 5. Publish the timetable when it's ready — a draft timetable is not yet visible outside staff editing it.

Expected result: A published timetable shows on the class's schedule and (if the Student/Parent Portal is on) the student's/parent's own timetable view.

Common mistakes: Trying to publish with an unresolved conflict — fix the flagged clash first.

16. Attendance

Purpose: Daily class attendance registers. **Who can do this:** School Admin, Principal manage any class (and reopen a locked register); Teacher records only their own assigned classes; Staff view only. **Prerequisites:** **Attendance** module on (default); the class must have enrolled students.

Steps — take attendance: 1. Go to **Attendance** → **Create register** (or **New attendance register**). 2. Choose the session, term (optional), level, arm, and date (cannot be a future date). 3. Click **Create register** — the class roster on that date is captured automatically. 4. On the register, mark each student **Present / Absent / Late / Excused** using the single-letter buttons, or use **Mark all present** then adjust exceptions. 5. Click **Save draft** to save progress, or **Save & submit** to lock it in (only enabled once every student is marked).

Steps — correct a submitted register: A School Admin/Principal can click **Reopen for correction** on a locked register, make changes, and resubmit.

Expected result: Attendance percentages roll up into the student's result-card attendance summary and the Attendance report.

Common mistakes: - Trying to submit with unmarked students — the **Save & submit** button stays disabled until everyone has a mark. - A Teacher trying to record for a class they aren't assigned to — they won't see it as an option; only School Admin/Principal can record for any class.

17. Assessments

Purpose: Score entry for classwork, tests, exams — the source data for Results. **Who can do this:** School Admin, Principal manage any class + configure categories; Teacher records only their own assigned (level, subject); Staff view only. **Prerequisites:** **Assessments** module on (default); at least one **assessment category** exists (School Admin/Principal create these under **Assessments** → **Categories**, e.g. "Classwork", "Exam").

Steps — create an assessment: 1. Go to **Assessments** → **Create** (or **New assessment**). 2. Choose the academic context (session, term, level, arm, subject — Teachers only see their own assigned combinations). 3. Choose the **Category**, enter **Maximum score**, a **Title**, the **Assessment date**, and optional **Instructions**. 4. Click **Create assessment** — the class roster on that date is captured.

Steps — enter scores: 1. Open the assessment → **Score sheet**. 2. Enter each student's score (leave blank if not yet scored) and an optional per-student comment. 3. Click **Save scores**. 4. **Publish** the assessment once scoring is complete, then **Lock** it — a locked assessment's scores feed into Results and can no longer be edited except by a **.manage**-holder unlocking it.

Expected result: Locked, published assessment scores become the input data a Result Run compiles from (§19).

Common mistakes: - Entering a score above the assessment's own maximum — rejected. - Forgetting to **Lock** the assessment — an unlocked assessment's scores are not picked up when a result run compiles.

18. Assignments

Purpose: Homework/take-home work with a due date and simple completion tracking (not scored — just pending/submitted/late/exempt). **Who can do this:** Same tiering as Assessments. **Prerequisites:** Assessments module on.

Steps: 1. Go to **Assessments** → **Assignments** tab → **Create**. 2. Set the class, subject, due date, and instructions. 3. **Publish** it — students/parents can now see it. 4. Mark student submission status from the assignment's **Submissions** screen. 5. **Close** the assignment when it's done.

Expected result: Published assignments show in the Student/Parent Portal's own Assignments view.

Common mistakes: There is no file upload for assignments in this version — it tracks completion status only, not attached work.

19. Results

Purpose: Compile a class's locked assessment scores into a termly result — a controlled multi-step lifecycle, not a single save. **Who can do this:** School Admin, Principal (full lifecycle including approve/publish/lock); Teacher only adds a class-teacher comment on their own assigned class; Staff view only. **Prerequisites:** **Results & Report Cards** module on (default); a grading scheme and weighting scheme configured (**Results** → **Grading schemes / Weighting schemes**); every subject's assessments for the term locked (§17).

Steps: 1. Go to **Results** → **Create** (a **result run** is one class, one term). 2. Choose session, term, level, arm, grading scheme, weighting scheme. 3. Open the run and click **Compile** — this reads every locked, published assessment score for that class/term and computes each student's subject percentages, overall average, grade, and (if ranking is on) class position. 4. Review the compiled numbers. 5. Click **Mark reviewed**, then **Approve** (numbers freeze from this point — further fixes need the adjustment workflow), then **Publish** (now visible to parents/students, if the portals are on), then **Lock** (the permanent historical record). 6. If a genuine correction is needed **after** locking, use the **adjustment** workflow on the affected student's subject result (propose → apply/reject) rather than editing anything directly.

Expected result: Each student gets a compiled result, a class position (if enabled), and a printable report card.

Common mistakes: - Trying to compile before every relevant assessment is locked — compilation is blocked with a clear list of what's missing. - Trying to edit a published/locked result directly — not possible by design; use the adjustment workflow. - Deleting a run — only possible while it has no compiled student results yet.

20. Report cards

Purpose: The printable/viewable per-student output of a result run. **Who can do this:** Anyone who can view results can view a report card for a run that's been compiled; Parent/Student see only published/locked ones for their own child/self. **Prerequisites:** A compiled result run.

Steps: 1. Open a result run → find the student → click **Report card**. 2. It renders with your school's logo, the configured visible fields (see **Results** → **Report card configuration**, where you control which of ~24 fields show — comments, attendance summary, signatures, etc.), and (if configured) principal/class-teacher signature images. 3. Print via your browser's print function — there is no separate PDF export button; the page is designed to print cleanly.

Common mistakes: Expecting a bulk "print all report cards" button — this version renders one student at a time; open each student's card individually (or loop through the class from the result run's student list).

21. Fees

Purpose: Fee categories, structures, and the school-wide fee overview. **Who can do this:** School Admin full control; Bursar full operational control; Principal view/report only; Teacher/Staff no access.

Prerequisites: **Fees & Payments** module on (default).

Steps — set up categories and structures (do this once per term/type): 1. Go to **Fees** → **Categories** — add categories like "Tuition", "Books" (mirrors how assessment categories work). 2. Go to **Fees** → **Fee structures** → **Create** — define an amount for a category × session × (optional term) × level × (optional arm).

Steps — see the school-wide picture: 1. Go to **Fees** — shows total charged / discounted / collected across the school, and a searchable list of students with their outstanding balance. 2. Click a student to open their full statement (see §22 for what Bursar does there).

Expected result: Structures let you raise identical charges quickly for a whole class (Bursar does the actual charging — §22); the overview gives you a school-wide balance snapshot.

Common mistakes: Editing a fee structure after charges have already been raised from it doesn't change those existing charges — each charge is a frozen snapshot of the structure at the time it was raised. Change the structure for *future* charges only.

22. Payments

Purpose: Recording money received and tracking balances — day-to-day work is normally Bursar's (see the [Bursar Manual](#) for full detail); School Admin has the same capability. **Who can do this:** School Admin, Bursar.

Quick summary (full detail in the Bursar manual): 1. Open a student's fee statement (**Fees** → search → click their name). 2. **Charges** panel: raise a charge, apply a discount, waive a charge. 3. **Payments**

panel: **Record payment** — amount, date, reference, method, and (optionally) allocate it straight to specific outstanding charges. 4. A payment can be **voided** later (reverses it from balances, keeps the record — never deleted).

Online payments (Paystack): if configured (**School settings** → **Payments** tab — enter your Paystack keys), parents/students see a **Pay online** button on their own fee statement once something is outstanding. A successful online payment is verified server-side and appears automatically as a payment on the statement — no manual entry needed.

23. Promotion

Purpose: Bulk-move a class of students to a new session/level/arm at term/year end, preserving full history. **Who can do this:** School Admin, Principal. **Prerequisites:** **Promotion & Graduation** module on (default); a target session/level/arm must already exist.

Steps: 1. Go to **Promotion** → **Create** (or **Promote students**). 2. **Step 1:** choose the **source** session, level, and (optional) arm — click **Find eligible students**. 3. **Step 2:** choose the **target** session, level, arm, add optional notes, then tick which students to promote (or **Select all**). 4. Click **Promote selected students**. 5. You'll see a success/failure summary — one student's issue never blocks the rest of the batch.

Expected result: Each promoted student gets a **new** enrollment in the target class; their old enrollment is preserved, closed — never deleted or rewritten. You can view a batch's outcome later from **Promotion** → open the batch.

Common mistakes: - Expecting an automatic pass/fail rule — there isn't one; every promotion is a deliberate administrative decision you make by selecting students. - Re-running a promotion for a student already in the target session is safely skipped, not duplicated.

24. Graduation

Purpose: Formally graduate students, ending their active enrollment while preserving their full history. **Who can do this:** School Admin, Principal. **Prerequisites:** **Promotion & Graduation** module on.

Steps: 1. Go to **Promotion** → **Graduation** → **Graduate students**. 2. **Step 1:** choose a session/level/(arm) to browse → **Find students**. 3. **Step 2:** set the graduating session, optional notes, tick students (or **Select all**) → **Graduate selected students**. 4. To reverse a mistaken graduation, use **Reactivate** on that student (available from the graduation history).

Expected result: Graduated students' status changes to **Graduated**; their historical enrollments and results remain fully intact and viewable.

Common mistakes: Graduating the wrong class by mistake — use **Reactivate** rather than trying to "undo" any other way.

25. Learning materials

Purpose: Share files (PDF, image, audio) with a specific class + subject. **Who can do this:** School Admin, Principal upload for any class; Teacher uploads only their own assigned class/subject; Staff/Bursar no access. **Prerequisites:** **Learning Materials** module on (off by default — enable it first).

Steps: 1. Go to **Learning Materials** → **Upload**. 2. Choose session, (optional) term, level/arm/subject (or, for a Teacher, pick from **Select one of your assigned classes**), a **Title**, optional description, and the **File** (PDF, JPG/PNG/WEBP, or MP3/M4A/WAV — max 20MB; video is not supported in this version). 3. Click **Upload & save**.

Expected result: Students in that class (and, via the Student Portal, that specific student) can view/download it.

Common mistakes: Uploading a video file — rejected regardless of file extension (the system checks actual file content, not just the name).

26. CBT (Computer-Based Testing)

Purpose: Online multiple-choice/true-false examinations. **Who can do this:** School Admin, Principal manage any exam; Teacher authors only for their own assigned class/subject; Staff view only; Student sits exams (separate **cbt . take** permission). **Prerequisites:** **CBT / Online Examinations** module on (off by default).

Steps — build and run an exam: 1. Go to **CBT** → **Create examination**. 2. Set the class/subject, duration, time window (start/end), pass mark, and **result release** (Immediate, or Scheduled for a specific date/time). 3. Save it as a **Draft**, then add questions — either write new ones or pull from the **Question Bank** (§27). 4. Click **Schedule** — this locks the question set and makes the exam visible to its class within its time window. (Draft exams are invisible to students.) 5. After the window closes (or you choose to), click **Close** — no further attempts can start. An attempt already in progress still finishes on its own via its own timer. 6. View **Attempts & results** from the exam's page for the full attempt list.

Expected result: Students in the assigned class see the exam appear in their own CBT list once scheduled, sit it within the time window, and (per your release setting) see their score immediately or from the scheduled time.

Common mistakes: - Trying to edit questions on a scheduled/closed exam — not possible; editing questions is only allowed while the exam is still a **Draft**. - Forgetting to add any questions before scheduling — an exam needs at least one question to be scheduled.

27. Question Bank

Purpose: A reusable, searchable pool of multiple-choice/true-false questions you can attach to any compatible exam. **Who can do this:** Same tiering as CBT. **Prerequisites:** CBT module on.

Steps: 1. Go to **CBT** → **Questions** (Question Bank). 2. Click **Add question** — write the question text, choose type (multiple-choice or true/false), enter options and mark the correct one(s), optionally scope it to a subject/level/arm, set a topic and difficulty. 3. Use **Activate / Deactivate / Archive** to control whether a question can be newly attached to an exam (existing exams that already used it are never affected by a later change here).

Expected result: Only **Active** questions can be newly attached to an exam; editing or archiving a question after it's attached never changes an exam that's already using it — each exam keeps its own frozen snapshot.

28. Entry / placement assessment

Purpose: Record an assessment for a prospective or newly admitted student — a record only, never an automatic placement decision. **Who can do this:** School Admin, Principal manage any; Teacher records only their own assigned classes; Staff view only. **Prerequisites:** **Entry / Placement Assessment** module on (off by default).

Steps: 1. Go to **Entry Assessment** → **Record an assessment**. 2. Enter the candidate's name and (if they have one) an admission reference, the level/arm/subject assessed, a score against a maximum, assessment date, and a free-text **result** label your school defines (e.g. "Pass"/"Recommend Primary 2"). 3. Save. 4. If the candidate proceeds and later gets a real **Student** record, you can optionally link this assessment to it.

Expected result: A searchable, exportable record — the system never turns this into a placement decision on its own; that stays a human judgment call.

29. Communication

Purpose: A staff-facing hub for logging communication with parents (calls, visits, concerns) plus school-wide announcements. **Who can do this:** Communication Hub — School Admin, Principal (full manage), Bursar/Teacher/Staff (log + view, Teacher can also resolve/escalate); Announcements — School Admin, Principal publish, others view. **Prerequisites:** **Notifications** module on (default).

Steps — log a communication thread: 1. Go to **Communication** → **New thread** (or **Log communication**). 2. Enter a subject, category, optionally link a student and/or guardian, and the message body. 3. Click **Log communication**. 4. Use **Resolve / Escalate / Reopen** as the conversation progresses.

Steps — publish an announcement: 1. Go to **Announcements** → **Create**. 2. Write it, choose an **audience** (everyone / all staff / teachers / parents / students), save as draft, then **Publish**.

Expected result: Published announcements appear to their audience, including the Parent/Student Portal if relevant; threads remain a staff-only inbox (parents/students never reply into a thread — they only see announcements and their own notifications).

30. Reports / analytics

Purpose: Dashboard KPIs plus a full set of filterable reports across every module, with CSV export.

Who can do this: School Admin, Principal, Bursar (fee reports), Teacher/Staff (their own accessible domains) — see the permission matrix. **Prerequisites:** **Reporting & Analytics** module on (default).

Steps: 1. Go to **Reports** — you'll see a card for each report area your role and enabled modules give you. 2. Open one (e.g. **Academic performance**) — it has tabs (Result runs, Student performance, Subject performance, Class/arm performance), filters (session/period/level/arm/subject/status), and pagination. 3. Click **Export CSV** (only visible if you hold export rights) to download exactly what the filtered/paginated view is showing, as a file.

Expected result: Numbers always match what the underlying module itself shows — reports never invent or recompute anything independently.

Common mistakes: Expecting a report for a module that's switched off to show data — a disabled module's report area is simply not reachable (no broken page, no misleading zero).

31. Audit logs

Purpose: An accountability trail of significant administrative actions — who did what, when. **Who can do this:** School Admin, Principal (**audit.view**); no one else. **Prerequisites:** None — always on, not a toggleable module.

Steps: 1. Go to **Audit Log** in the left navigation. 2. Search/filter by event type, actor, affected record, or date range. 3. Click any entry for full detail (including a before/after diff where relevant). 4. **Export CSV** for the filtered view.

Expected result: A read-only, permanent record — there is no edit or delete function anywhere for an audit entry, by design.

Common mistakes: Expecting every click to be logged — only genuinely significant actions are (role changes, module toggles, student/teacher creation and status changes, result publish/lock, payments, exam scheduling, etc.), not routine page views.

32. Parent Portal

Purpose: What a Parent-role user sees — see the full [Parent Manual](#). **Your job as School Admin:** Ensure the **Parent Portal** module is on (§14), the guardian is linked to their child (§11), and the guardian's account has the **Parent** role (§12).

33. Student Portal

Purpose: What a Student-role user sees — see the full [Student Manual](#). **Your job as School Admin:** Ensure the **Student Portal** module is on (§14), the student's account is linked (§10), and their account has the **Student** role (§12).

34. Account / security management

Purpose: Your own account's settings. **Who can do this:** Every signed-in user, for their own account.

Steps: 1. Click your name (top-right) → **Account settings**, or go to **Settings** → **Profile**. 2. Update your name/email, or change your password (**Settings** → **Password**). 3. **Switch school** (top-right, if you belong to more than one school or are a platform admin) to change which school you're currently working in. 4. **Sign out** from the same top-right menu.

Common mistakes: Changing your email requires re-verifying it before some features work again — check for a verification email after changing it.
