

Teacher Manual

Day-to-day workflows for teaching staff

School Management Platform

Teacher Manual

A practical guide for the **Teacher** role. As a Teacher, you only see and act on the specific classes and subjects you've been **assigned** to by your School Admin/Principal (Teachers → your profile → assignments) — this manual only covers what you can actually do.

Login

1. Go to the sign-in page, enter your **Email address** and **Password**, click **Sign in**.
2. Forgot your password? Use **Forgot password?** on the sign-in page.
3. If you can't get in, check with your School Admin — your account may not yet have the Teacher role, or may be suspended.

Dashboard

After signing in you land on the **Dashboard** — a snapshot of the whole school (active students/staff counts, recent admin activity if you have audit access, and KPI cards if the Reports module is on and you hold the relevant permission). Your own working area is reached through the left navigation, not the dashboard itself.

Your assigned subjects/classes

You don't manage this yourself — your School Admin/Principal sets your **assignments** (which class + subject you teach) from your profile under **Teachers**. Everywhere you record attendance, scores, CBT content, or learning materials, you'll only ever see the classes/subjects you've been assigned to. If a class you expect to teach doesn't appear, ask your School Admin to check your assignment.

Timetable

Purpose: See your own weekly teaching schedule. **Prerequisites:** Timetable module on (your school may not have this switched on — it's an optional module).

Steps: Go to **Timetable** in the left navigation → your own teacher-view schedule shows your periods across the week.

Attendance

Purpose: Take daily attendance for your assigned class(es). **Prerequisites:** Attendance module on; you must be assigned to the class.

Steps: 1. Go to **Attendance** → **Create register** (only your assigned classes appear in the level/arm choices). 2. Choose session, term, level, arm, and the date (cannot be a future date). 3. Click **Create register** — today's roster is captured automatically. 4. Mark each student **Present / Absent / Late / Excused** — click the single-letter buttons, or **Mark all present** then adjust exceptions. Add a note if useful. 5. Click **Save draft** to keep working later, or **Save & submit** once everyone is marked (this button stays disabled until every student has a mark).

Expected result: A submitted register is locked — if you need to correct it afterward, ask your School Admin/Principal to **Reopen for correction** (only they can do that).

Troubleshooting: If the class you want isn't in the dropdown, you're not assigned to it — check with your School Admin.

Assessments

Purpose: Create assessments and enter scores for your assigned class/subject. **Prerequisites:** Assessments module on; at least one assessment category exists (your School Admin sets these up).

Steps — create one: 1. Go to **Assessments** → **New assessment**. 2. Choose the class/subject (only your assignments appear), category (e.g. Classwork, Test, Exam), maximum score, a title, and the assessment date. 3. Click **Create assessment** — the roster on that date is captured.

Steps — enter scores: 1. Open the assessment → **Score sheet**. 2. Type each student's score (leave blank for not-yet-scored), add an optional comment. 3. Click **Save scores** — you can come back and edit while the assessment is still a **draft**. 4. Once scoring is complete, **Publish** it, then **Lock** it — a locked assessment's scores are what feed into the class's Results.

Common mistakes: A score above the assessment's own maximum is rejected — check the "out of :n" hint next to the score sheet. Once locked, you can no longer change scores yourself — ask your School Admin/Principal to unlock it if a genuine correction is needed.

Assignments

Purpose: Set homework with a due date; track who's submitted (no file upload — completion status only).

Steps: 1. Go to **Assessments** → **Assignments** → **Create**. 2. Set class, subject, due date, instructions. 3. **Publish** — now visible to students/parents. 4. Open **Submissions** to mark each student pending/submitted/late/ exempt as work comes in. 5. **Close** it once done.

Assignment submissions

See the "Assignments" steps above — you mark submission status yourself from the assignment's **Submissions** screen; students don't upload files in this version.

Learning materials

Purpose: Upload a file (PDF/image/audio) for your assigned class/subject. **Prerequisites:** Learning Materials module on (optional module — may not be enabled at your school).

Steps: 1. Go to **Learning Materials** → **Upload**. 2. Choose **Session**, optional **Term**, and pick **Class & subject** from **Select one of your assigned classes** (a dropdown of your own assignments, not a free class/subject picker). 3. Enter a **Title**, optional description, and choose the **File** (PDF, JPG/PNG/WEBP, or MP3/M4A/WAV — max 20MB; video isn't supported). 4. Click **Upload & save**.

Expected result: Students in that class can view/download it (video files are rejected even if renamed — the system checks the real file content).

Question Bank

Purpose: Write reusable CBT questions for your subject. **Prerequisites:** CBT module on.

Steps: Go to **CBT** → **Questions** → **Add question**. Write the question, choose multiple-choice or true/false, enter options and mark the correct one(s), optionally set a subject/level/arm scope, topic, and difficulty. Only **Active** questions can be attached to a new exam — use **Deactivate/Archive** to retire one (this never affects an exam that already used it).

CBT (creating/managing exams for your class)

Purpose: Build and schedule an online exam for a class/subject you teach. **Prerequisites:** CBT module on; you must be assigned to the class + subject.

Steps: 1. Go to **CBT** → **Create examination**. 2. Choose your class/subject (only your assignments appear), duration, time window, pass mark, and result release (immediate or scheduled). 3. Save as **Draft**, add questions (write new ones or pull from the Question Bank). 4. Click **Schedule** — locks the question set, makes it visible to students within its time window. You can no longer edit questions once scheduled. 5. **Close** it when done, or let it close automatically at the end of its window. View **Attempts & results** for the full list — you always see every student's actual score, regardless of the result-release setting (that setting only controls what the **student** sees, and when).

Common mistakes: Trying to add/remove a question after scheduling — not possible; editing questions requires the exam still be a **Draft**.

Results visibility

Purpose: See compiled results for your assigned class, and add a class-teacher comment.

Prerequisites: Results module on; the result run must be compiled.

Steps: Go to **Results** — you see runs for your own assigned classes. Open one to see each student's compiled percentage, grade, and position (if ranking is on). You can add/edit a **class-teacher comment** on a student's result while you're assigned to that class — you cannot compile, approve, publish, or lock a run yourself; that's School Admin/Principal work.

Communication

Purpose: Log parent communication and respond to threads. **Prerequisites:** Notifications module on.

Steps: Go to **Communication** → **New thread** to log a call/visit/ concern (optionally link the student/guardian). Use **Resolve** or **Escalate** on an existing thread as it progresses. You also see published **Announcements** relevant to staff.

Profile / security

Click your name (top-right) → **Account settings** to update your name, email, or password. Use **Switch school** if you teach at more than one school on this platform. **Sign out** from the same menu.
